POWER BI - CREATE FILTERS

Amit Thinks

Power BI - Filters

A filter in Power BI narrows down the data displayed in your reports and visualizations. It is based on specific criteria, such as a filter for showing data only for a specific region, such as “North India”. The main purpose of filters is to ease in analyzing and drawing insights.

Types of Filters in Power BI

The following are the types of Filters:

- Filters on this page
- Filters on all pages
- Filters on this visual
