INSTALL POWER BI ON WINDOWS 11

Amit Thinks

Power BI Desktop has three views:

- **Report view** – Create visualizations, and set them with multiple pages
- **Data view** – The data in your report is in data model format. Create new columns, manage relationships, etc.
- **Model view** – A graphical representation of the relationships in the data model. Easily modify and update.

Power BI Desktop also with Power Query Editor. Connect with multiple data sources using the Power Query Editor. Transform the data easily.
